

Capability: Fitness to practice:

Professionalism and protecting self and others from harm; including awareness of when an individual's performance, conduct or health, or that of others, might put patients, themselves, or their colleagues at risk.

Learning Outcomes

- Demonstrating the attitudes and behaviours expected of a good doctor
- Managing the factors that influence your performance
- Promoting health and wellbeing in yourself and colleagues

Word descriptors

Needs further development	Competent	Excellent
1) Understands and follows the GMC's 'duties of a doctor' guidance. (As found in "Good medical practice") 2) Complies with accepted codes of professional practice, showing awareness of their own values and attitudes. 3) Applies relevant ethical, financial, legal, and regulatory frameworks within the care provided. 4) Evaluates their clinical care and is able to justify actions to patients, colleagues, and professional bodies. 5) Demonstrates insight into any personal physical or mental illness or habits which might interfere with the competent delivery of patient care. 6) Identifies and notifies an appropriate person when their own or a colleague's performance, conduct	1) Demonstrates the accepted codes of practice to promote patient safety and effective team working. 2) Reacts promptly, respectfully, and impartially when there are concerns about self or colleagues. 3) Works within the limits of their own ability and expertise as a GP. 4) Adopts a self-directed approach to learning, engaging with assessment. 5) Encourages scrutiny of professional behaviour, is open to feedback and demonstrates a willingness to change. 6) Takes advice from appropriate people and, if necessary, engages in a referral procedure or remediation. 7) Uses mechanisms to reflect on and learn from complaints or performance issues to	1) Encourages an organisational culture in which the health and wellbeing of all members is valued and supported, especially in the workplace. 2) Anticipates system or practice areas requiring improvement, and proactively rectifies them to improve patient care. 3) Anticipates situations that might impact on their work-life balance and seeks to minimise any adverse effects on themselves or their patients. 4) Fosters a supportive environment where colleagues are able to share difficulties and reflect on their performance. 5) Promotes the wellbeing and health of all colleagues and

or health might be putting others at risk. 7) Responds to complaints or performance issues appropriately. 8) Monitors performance and demonstrates insight into their personal needs. 9) Demonstrates awareness of the needs of colleagues.	improve patient care. 8) Takes effective steps to address any personal health issue or behaviour that is impacting on their performance as a doctor. 9) Achieves a balance between professional and personal demands enabling work commitments to be met and maintaining their own health. 10) Adopts a proactive approach in ensuring their personal health and wellbeing.	staff, both individually and collectively.
---	---	---

Capability: An ethical approach

Practicing ethically with integrity and a respect for equality and diversity.

Learning Outcomes

Treating others fairly and with respect, acting without discrimination or prejudice

Providing care with compassion and kindness

Promoting an environment of inclusivity, safety, cultural humility, and freedom to speak up

Word descriptors

Needs further development	Competent	Excellent
1) Shows awareness of the professional codes of practice as described by the GMC in 'Good medical practice'. 2) Demonstrates a non-judgemental approach in dealing with patients, carers, and colleagues, respecting the rights and personal dignity of others. 3) Contributes to an environment where fairness, respect and participation are valued, 4) Recognises and takes action to address prejudice, oppression and unfair discrimination in themselves and others within teams. 5) Takes steps to enhance patient understanding when there are communication or cultural barriers that may be limiting a patient's ability to make an informed decision. 6) Records, shares, and	1) Applies 'Good medical practice' in their own clinical practice. 2) Reflects on how their values, attitudes and ethics might influence professional behaviour. 3) Identifies and discusses ethical conflicts arising within their roles as a clinician, patient advocate and leader in the health service. 4) Actively promotes equality of opportunity for patients to access healthcare, ensuring fairness and respect in their day-to-day practice. 5) Responds to complaints in a timely and appropriate manner, recognising their duty of candour. 6) Relates to people as individuals and challenges attitudes that dehumanise or stereotype others. 7) Actively promotes a culture of inclusion where everyone is	1) Anticipates the potential for conflicts of interest and takes appropriate action to avoid these. 2) Anticipates and takes appropriate action in situations where discrimination or bullying might occur. 3) Recognises that their duty of care for their patients extends beyond the immediate team and spans the NHS and other services. 4) Actively supports and harnesses differences between people for the benefit of the organisation and patients alike.

receives information in an open, honest, sensitive, and unbiased manner. 7) Provides culturally sensitive healthcare, conscious of their own perspectives towards others. 8) Considers new cultural ideas and their implications for health provision and behaviours.	welcome in general practice, regardless of background or any protected characteristics.	
--	--	--

Capability: Communicating and consulting

Communicating with patients, the use of recognised consultation techniques, establishing and maintaining patient partnerships, managing challenging consultations, third-party consulting, the use of interpreters, and consulting modalities across the range of in-person and remote

Learning Outcomes

Establishing an effective partnership with the patient through a range of in-person and remote consulting modalities

Managing the additional challenge of consultations with patients who have particular communication needs, or who have different languages, cultures, beliefs, and educational backgrounds, to your own

Maintaining continuing relationships with patients, carers, and families

Word descriptors

Needs further development	Competent	Excellent
1) Consults to an acceptable standard but lacks focus and requires longer consultation times. 2) Adopts a basic personalised approach to care. 3) Communicates in a way that seeks to establish a shared understanding and patient involvement. 4) Adapts communication to the mode of consultation. 5) Uses knowledge of a range of consultation models or theories. 6) Uses language and explanations that are technically correct but not consistently tailored to the needs and characteristics of the patient. 7) Understands the need for effective consulting and developing an	1) Uses the most appropriate mode of consultation, including in-person and remote, taking account of individual patient needs, preferences, and safety. 2) Explores the patient's understanding of what has taken place. 3) Uses the patient's understanding to help improve the explanation offered. 4) Works in partnership with the patient, agreeing a shared plan that respects the patient's priorities and preference for involvement. 5) Consults in an organised and structured way, achieving the main tasks of the consultation in a timely manner. 6) Explores the patient's agenda, health beliefs	1) Uses advanced consultation skills, such as confrontation or catharsis, to achieve better patient outcomes. 2) Consults effectively in a focused manner, moving beyond the essential to take a holistic view of the patient's needs within the time frame of a normal consultation. 3) Used a variety of advanced or innovative communication techniques and resources adapted to the needs of the patient, respecting individual characteristics and differences. 4) Whenever possible, adopts plans that respect the patient's autonomy. When there is a difference

awareness of the wide range of consultation models that might be used. 8) Takes steps to address barriers to communication, including use of interpreters. 9) Develops a relationship with the patient that is effective but is focused on the problem rather than the patient. 10) Elicits psychological and social information to place the patient's problem in context.	and preferences 7) Uses language that considers the needs and characteristics of the patient, for instance when talking to children or patients with learning disabilities. 8) Manages consultations effectively with patients who have communication needs, different languages, cultures, beliefs or educational backgrounds. 9) Demonstrates a constructive and flexible approach to consulting. 10) Facilitates and encourages a trusted long-term relationship with 'their' doctor, using the consultation to improve access to care and enhance continuity of care.	of opinion the patient's autonomy is respected and a positive relationship is maintained.
---	--	--

Capability: Data Gathering and interpretation

Gathering, interpretation, and use of data for clinical judgement, including information gathered from the history, clinical records, examination, and investigations.

Learning Outcomes

Applying an organised approach to data gathering and investigation.
Interpreting findings accurately and appropriately.

Word descriptors

Needs further development	Competent	Excellent
1) Accumulates information in a formulaic way or gathers more than is required. 2) Selects examinations and investigations that are broadly in line with the patient's problems. 3) Demonstrates a limited range of data gathering styles and methods. 4) Identifies abnormal findings and results. 5) Displays an appropriate level of knowledge of clinical norms, measurements and investigations and is aware of how these relate to the patient's condition.	1) Gathers information systematically using questions appropriately targeted to the problem. 2) Understands the importance of, and makes appropriate use of, existing information about the problem and the patient's context. 3) Demonstrates different styles of data gathering and adapts these to a wide range of patients and situations. 4) Chooses examinations and targets investigations appropriately and efficiently. 5) Understands the significance and implications of findings and results and takes appropriate action. 6) Uses a stepwise approach, basing further enquiries, examinations, and tests on what is already known and what is later discovered.	1) Identifies expertly the nature and scope of enquiry needed to investigate the problem, or multiple problems, within a short time frame. 2) Prioritises problems in a way that enhances patient satisfaction. 3) Gathers information in a wide range of circumstances and across all patient groups (including their family and representatives) in a sensitive, empathic, and ethical manner. 4) Utilises the predictive value of symptoms, signs, and investigations according to the features of the WPBA work and local population and applies this knowledge to their decision-making.

Capability: Clinical examination and procedural skills

Demonstrating competence in general and systemic examinations of all the clinical curriculum areas, this includes the five mandatory examinations and a range of skills relevant to General Practice.

Learning Outcomes

Demonstrating a proficient approach to clinical examination and procedural skills

Word descriptors

Needs further development	Competent	Excellent
1) Undertakes examination when appropriate and demonstrates all the basic examination skills needed as a GP. 2) Elicits relevant clinical signs, both normal and abnormal. 3) Suggests appropriate examinations and procedures related to the patient's problem(s). 4) Conducts examination sensitively and without causing the patient harm. 5) Shows awareness of personal limitations and boundaries in clinical examination. 6) Performs examinations and procedures with the patient's consent and with a clinically justifiable reason to do so. 7) Arranges the place of the examination to give the patient privacy and respect their dignity.	1) Conducts examinations targeted to the patient's problems. 2) Interprets physical signs accurately. 3) Varies procedure options according to circumstances and the preferences of the patient. 4) Identifies and reflects on ethical issues with regard to examination and procedural skills. 5) Recognises and acknowledges the patient's concerns before and during the examination and puts them at ease. 6) Shows awareness of the medico-legal background, informed consent, mental capacity, and the best interests of the patient. 7) Recognises the verbal and non-verbal clues that the patient is not comfortable with an intrusion into their personal space, especially the prospect or conduct of intimate	1) Demonstrates a range of procedural skills to a high standard, such as joint injections, minor surgery and fitting contraceptive devices. 2) Engages with quality improvement initiatives with regard to examination and procedural skills. 3) Contributes to the development of systems that reduce risk in clinical examination and procedural skills.

8) Observes the professional codes of practice including the use of chaperones	examinations	
--	--------------	--

Capability: Decision-making and Diagnosis

Adopting a conscious, organised approach to making diagnosis and decisions that are tailored to the particular circumstances in which they are required.

Learning Outcomes

Adopting appropriate decision-making principles based on a shared understanding
Using best available, current, valid, and relevant evidence

Word descriptors

Needs further development	Competent	Excellent
1) Generates differential diagnoses that may be too narrow or broad. 2) Generates and tests appropriate hypotheses. 3) Develops independent skills in decision-making and uses the support of others to confirm these are correct. 4) Uses decision aids (such as algorithms and risk calculators) for straightforward clinical decisions. 5) Justifies chosen options with evidence. 6) Is aware of personal limitations in knowledge and experience.	1) Makes diagnoses in a structured way using a problem-solving method. 2) Thinks flexibly around problems, generating functional solutions. 3) Demonstrates confidence in, and takes ownership of, own decisions while being aware of their own limitations. 4) Demonstrates rapid and safe decision-making when managing urgent clinical situations and when it is appropriate to defer an action. 5) Uses pattern recognition to identify diagnoses quickly, safely, and reliably. 6) Keeps an open mind and is able to adjust and revise decisions and diagnoses when considering new relevant information. 7) Addresses problems that present early and/or in an undifferentiated way by integrating all the available information	1) Understands the benefits and limitations of pattern recognition and an analytical approach, and knows how to use them concurrently. 2) Reflects appropriately on complex decisions and develops mechanisms to be comfortable with these choices. 3) Justifies discretionary judgement, no longer relying on rules and protocols in situations of uncertainty or complexity, for example in patients with multiple problems.

	to help generate a differential diagnosis. 8) Uses an understanding of probability based on prevalence, incidence, and natural history of illness to aid decision-making.	
--	---	--

Capability: Clinical management

The recognition and a generalist's management of patients' problems.

Learning Outcomes

- Providing collaborative clinical care to patients that supports their autonomy
- Using a reasoned approach to clinical management that includes supported self-care
- Making appropriate use of other professionals and services
- Providing urgent care when needed

Word descriptors

Needs further development	Competent	Excellent
1) Develops knowledge and skills to provide care to patients of all backgrounds, ages and life stages. 2) Facilitates continuity of care for the patient's problem, for example through effective record keeping. 3) Uses safe management plans, taking into account the preference of the patient. 4) Shows knowledge of available interventions. 5) Considers and arranges follow-up based on patient need. 6) Prescribes safely, including routinely checking on drug interactions and side effects. 7) Gives appropriate and specific safety-netting advice. 8) Understands and makes referrals, considering alternative pathways	1) Adapts the clinical approach to provide comprehensive care to patients who have individual perspectives and health and care needs. 2) Co-ordinates care for patients of all backgrounds, ages, and life stages. 3) Provides comprehensive continuity of care, taking into account the patient's problems and their social situation. 4) Varies management options responsively according to the circumstances, priorities, and preferences of those involved. 5) Considers a 'wait and see' approach where appropriate. 6) Uses effective prioritisation of problems when the patient presents with multiple issues. 7) Offers a variety of follow-up	1) Identifies and develops strategies to improve coordination and collaborative care for individual patients of all backgrounds, ages and life stages. 2) Designs or improves services for identified groups of patients. 3) Empowers the patient with confidence to manage problems independently, together with knowledge of when to seek further help. 4) Challenges unrealistic patient expectations and consulting patterns with regard to follow up of current and future problems. 5) Develops systems for drug monitoring and safety alerts. 6) Identifies areas for improvement in referral processes and pathways and contributes to quality improvement.

where appropriate. 9) Recognises acute care as part of the wider continuum of patient care.	arrangements that are safe and appropriate. 8) Prescribes safely and applies local and national guidelines, including drug and non-drug therapies. 9) Reviews the patient's medication in terms of evidence-based prescribing, cost effectiveness and patient understanding. 10) Refers appropriately, taking into account all available resources. 11) Advocates for the patient and their carers as they navigate the health and care system. 12) Organises follow up of patients through multiprofessional, team-based and structured approaches. 13) Responds rapidly and skilfully to emergencies, with appropriate follow-up for the patient and their family. 14) Co-ordinates care both within the practice team and with other services.	7) Contributes to reflection on emergencies as significant events and how these can be used to improve patient care in the future.
---	---	---

Capability: Medical complexity

Care extending beyond the acute problem, including the management of co-morbidity, uncertainty, risk, and health promotion.

Learning Outcomes

Enabling people with long-term conditions to optimise their health

Using a personalised approach to manage and monitor concurrent health problems for individual patients

Managing risk and uncertainty while adopting safe and effective approaches for patients with complex needs

Coordinating and overseeing patient care across health systems.

Word descriptors

Needs further development	Competent	Excellent
1) Recognises the impact of the patient's lifestyle, circumstances and environment on their health. 2) Identifies and recognises multiple health issues in individuals. 3) Encourages a person-centred approach to consider the issues that matter to an individual with multiple problems. 4) Identifies and tolerates clinical risks and uncertainties in the consultation. 5) Attempts to prioritise management options based on an assessment of patient risk. 6) Manages patients with multiple problems with reference to appropriate guidelines for each condition.	1) Encourages the patient to participate in appropriate health promotion and disease prevention strategies. 2) Supports the patient in addressing social and environmental factors. 3) Continually encourages improvement and rehabilitation and, where appropriate, recovery. 4) Actively facilitates continuity of care for patients with complex needs. 5) Demonstrates a reasoned approach to simultaneously managing multiple health problems. 6) Establishes partnerships that enable a patient-centred approach to optimise care. 7) Manages uncertainty	1) Coordinates a team-based approach to health promotion in its widest sense, including using non-NHS resources. 2) Adopts a personalised care approach to monitoring, adjusting and managing concurrent health problems 3) Anticipates and employs a variety of strategies for managing uncertainty. 4) Moves comfortably beyond single condition guidelines and protocols in situations of multi-morbidity and polypharmacy, while maintaining the patient's trust. 5) Uses the patient's perception of risk to

7) Demonstrates awareness of the importance of continuity of care for patients with complex needs.	and communicates risk effectively. 8) Recognises the limitations of protocols in making decisions and explores ways of dealing with these situations with the patient and carers, consulting with colleagues when appropriate. 9) Actively facilitates continuity of care for patients with complex needs, either personally or across teams.	enhance the management plan. 6) Supports individuals in 'navigating' clinical pathways and continually coordinates their care.
---	--	--

Capability: Team working

Working effectively with others to ensure good patient care and includes the sharing of information with colleagues and utilising the skills of a multiprofessional team

Learning Outcomes

Working as an effective member of multiprofessional and diverse teams
Leading and coordinating a team-based approach to patient care

Word descriptors

Needs further development	Competent	Excellent
1) Understands and respects the roles, skills and responsibilities of other team members. 2) Responds to communications from other team members in a timely and constructive manner. 3) Engages with, and is accessible to, other members of the team. 4) Understands the importance of integrating themselves into the various teams in which they participate. 5) Shows awareness of the diversity within the team and the potential this offers. 6) Shows awareness of the GPs role as a leader and co-ordinator of a team-based approach to patient care. 7) Uses medical records to communicate with other professionals and services to facilitate effective transfer of clinical	1) Is an effective team member, working flexibly with the various teams involved in day-to-day primary care. 2) Understands the context within which different team members are working. 3) Appreciates the increased efficacy in delivering patient care when teams work collaboratively rather than as individuals. 4) Communicates proactively with team members so that patient care is enhanced, using an appropriate mode of communication for the circumstances. 5) Contributes positively to teams and reflects on how they work and the members interact. 6) Fosters a positive attitude to the opportunity and potential of a diverse team. 7) Anticipates and manages the	1) Leads a team-based approach to enhance patient care. 2) Approaches team development positively and creatively. 3) Utilises the strengths and weaknesses of each team member to improve the effectiveness of the whole team. 4) Understands group dynamics and utilises this to effect change. 5) Encourages the contribution of others, employing a range of skills including active listening. 6) Demonstrates the ability to work across professional, service, and organisational boundaries, such as participation in multi-agency review.

information. 8) Seeks advice from other professionals and team members where appropriate.	problems that arise at the interfaces between different healthcare professionals, services, and organisations. 8) Supports the transition of patient care between professionals and teams. 9) Uses the skills of the wider team to enhance patient care.	
---	---	--

Capability: Performance, learning and teaching

Maintaining the performance and effective continuing professional development (CPD) of oneself and others. The evidence for these activities should be shared in a timely manner within the portfolio.

Learning Outcomes

- Continuously evaluating and improving the care you provide
- Adopting a safe and evidence-informed approach to improve quality of care
- Supporting the education and professional development of colleagues

Word descriptors

Needs further development	Competent	Excellent
1) Demonstrates clinical curiosity and reflective practice, engaging in learning identified through clinical learning needs. 2) Provides evidence of identifying and addressing learning needs using PDPs. 3) Obtains and acts on feedback from patients and colleagues regarding practitioner performance . 4) Adapts behaviour positively in response to the clinical governance activities of the organisation, including quality improvement activities and learning event analyses. 5) Recognises situations where patient safety could be compromised and takes action to address this. 6) Knows how to access the available evidence, including	1) Judges the weight of evidence, using critical appraisal skills to inform decision-making. 2) Shows a commitment to professional development through reflection on performance and the identification of personal learning needs. 3) Addresses learning needs using targeted personal development plans and demonstrates integration into future professional practice. 4) Systematically evaluates performance and learning against external standards, using this information to inform their learning. 5) Engages in learning event reviews in a timely and effective manner and promotes learning from these as a team-based exercise.	1) Moves beyond the use of existing evidence towards initiating and collaborating in research that addresses unanswered questions. 2) Encourages and facilitates participation and application of clinical governance activities, by involving the practice, the wider primary care team, and other organisations. 3) Uses professional judgement to decide when to initiate and develop protocols and when to challenge their use. 4) Engages in the supervision of students and colleagues. 5) Constructs teaching plans, evaluates the outcome of teaching

the medical literature, clinical performance standards and guidelines for patient care. 7) Uses equipment safely and complies with safety protocols. 8) Identifies potential for spread of infection and takes measures to reduce risk. 9) Contributes to the education of others. 10) Participates in wider learning activities.	6) Participates in quality improvement activities and uses these to evaluate and suggest improvements in personal and practice performance, sharing their learning. 7) Measures and monitors the outcomes of care to ensure the safety and effectiveness of the services provided. 8) Identifies learning objectives and preferences, utilising appropriate methods to teach others. 9) Participates in the evaluation and personal development of other team members, including providing feedback.	sessions and seeks feedback to enable reflection on performance.
--	--	---

Capability: Organisation, management and leadership

Understanding how primary care is organised within the NHS, how teams are managed and the development of clinical leadership skills.

Learning Outcomes

- Advocating for medical generalism in healthcare
- Applying leadership skills to help improve your organisation's performance
- Developing the financial and business skills required for your role
- Making effective use of data, technology, and communication systems to provide better patient care

Word descriptors

Needs further development	Competent	Excellent
1) Understands the overarching structure of the UK healthcare system and shows awareness of the range of services available. 2) Recognises the importance of generalism in coordinating patient care to provide a point of contact bridging all parts of the NHS. 3) Demonstrates personal organisational, leadership and time management skills so that patients and colleagues are not unreasonably inconvenienced or come to any harm. 4) Demonstrates awareness of and responds positively to change in the organisation. 5) Manages own workload responsibly. 6) Shows awareness of the basics of	1) Applies the principles of generalism, including providing patient-centred care that considers external influences such as population health, environmental factors and health inequalities. 2) Understands the impact of broader organisational influences and pressures. 3) Organises self effectively with due consideration for patients and colleagues. 4) Demonstrates effective time management, handover skills, prioritisation, delegation and leadership. 5) Leads and supports change in the organisation, involving and working with the team to deliver defined outcomes.	1) Manages a high degree of uncertainty and accepts and balances risk at individual, community and systems levels. 2) Actively facilitates and evaluates change in the organisation. 3) Takes a lead role in supporting the organisation to respond to exceptional pressures 4) Understands the role and responsibilities of the partnership model and/or service delivery. 5) Uses and modifies organisational and IT systems to facilitate clinical care and governance.

organisational, financial, and regulatory frameworks within primary care. 7) Uses the clinical computer systems during patient contacts, routinely recording each clinical contact in a timely manner following the record keeping standards of the organisation.	6) Responds proactively and supportively when services are under pressure in a responsible and considered way. 7) Reports, records, and shares safety incidents effectively. 8) Recognises responsibility in advocating for self and colleagues through Freedom to Speak Up. 9) Understands the organisational financial and regulatory frameworks within primary care. 10) Uses the primary care organisational and IT systems routinely and effectively in patient care. 11) Uses the IT system during consultations whilst maintaining rapport with the patient. 12) Produces records that are accurate, comprehensive, concise, appropriately coded, and understandable.	
---	---	--

Capability: Holistic practice, health promotion and safeguarding

Operating in physical, psychological, socio-economic, and cultural dimensions. Taking into account patient's feelings and opinions, encouraging health improvement, self-management, preventative medicine and shared care planning with patients and their carers. The skills and knowledge to consider and take appropriate safeguarding actions.

Learning Outcomes

Demonstrating the holistic mindset of a generalist medical practitioner
Supporting people through their experiences of health, illness, and recovery with a personalised approach
Safeguarding individuals, families, and local population

Word descriptors

Needs further development	Competent	Excellent
1) Understands that health is a state of physical, mental and social wellbeing and not merely the absence of disease or infirmity. 2) Enquires into physical, psychological, and social aspects of the patient's problem. 3) Recognises the impact of the problem on the patient's life. 4) Offers treatment and support for the physical, psychological, and social aspects of the patient's problem. 5) Understands the role of the GP to provide a personalised approach to each patient to help promote recovery and a healthy lifestyle, ensuring every contact counts. 6) Recognises that every person has a unique set of values	1) Understands the patient in relation to their socio-economic and cultural background, using this to inform a non-judgemental discussion and enable practical suggestions for managing the patient's problem and putting them at ease. 2) Recognises the impact of the problem on the patient, their family and/or carers. 3) Recognises what matters to the patient and works collaboratively to enhance patient care. 4) Uses appropriate support agencies tailored to the needs of the patient and/or their family and carers. 5) Demonstrates the skills and assertiveness to challenge unhelpful health beliefs or behaviours, whilst	1) Recognises and shows understanding of the limits of the doctor's ability to intervene in every aspect of holistic patient care. 2) Facilitates appropriate long-term support for patients, their families and carers that is realistic and limits doctor dependence. 3) Makes effective use of tools in health promotion, such as decision aids, to improve health understanding. 4) Demonstrates skills and knowledge to contribute effectively to safeguarding processes and systems within the practice or locality. 5) Contributes to formulating policy documents and

and experiences of health and illness that may affect their use of the healthcare system. 7) Understands and demonstrates principles of adult and child safeguarding, recognising potential indicators of abuse, neglect, or other forms of harm, taking appropriate action.	remaining compassionate and non-judgemental, and maintaining a continuing and productive relationship. 6) Facilitates health improvement and supports self-management during illness and recovery. 7) Seeks to identify those who are vulnerable and reduce the risk of abuse, neglect, or other forms of harm. 8) Demonstrates appropriate responses to adult and child safeguarding concerns, including ensuring information is shared and referrals made appropriately.	communicating effective safeguarding plans for adults or children at risk of abuse, neglect, and other forms of harm with wider agencies.
--	--	--

Capability: Community health and environmental sustainability

Managing the health and social care of the practice population and local community. It incorporates an understanding of the interconnectedness of health of populations and the planet.

Learning Outcomes

- Understanding the health service and your role within it
- Building relationships with the communities in which you work
- Promoting population and planetary health

Word descriptors

Needs further development	Competent	Excellent
1) Understands the current structure of the local healthcare system, including the organisations within it. 2) Recognises how the limitation of resources affects healthcare. 3) Accesses local services where appropriate. 4) Appreciates the environmental impact of different parts of the NHS. 5) Identifies the health characteristics of the populations with whom the team works, including their cultural, occupational, epidemiological, environmental, economic, and social factors. 6) Identifies groups who may find accessing services harder and the greater health burden associated with this. 7) Understands their professional duty to help tackle health inequalities and	1) Demonstrates the breadth of GP roles across the healthcare system, such as patient advocate, family practitioner, generalist and 'gate keeper'. 2) Balances the needs of the individual patient, the health needs of the local communities and available resources when making referral(s). 3) Undertakes safe and cost-effective prescribing. 4) Follows protocols with appropriate flexibility incorporating the patient's preference. 5) Makes efforts to practise healthcare in an environmentally sustainable way. 6) Applies an understanding of how the characteristics of the local population shape the provision of care. 7) Takes proactive steps to tackle health inequalities and	1) Actively participates in helping to develop services that are relevant to local communities and reduce inequalities and/or improve environmental sustainability to improve healthcare. 2) Balances the needs of individual patients with the health needs of the local community, available resources, and environmental sustainability, managing any conflicts of interest. 3) Engages with organisations involved in determining and/or providing local community or health services. 4) Develops an understanding of the availability of natural resources (such as parks, green spaces and water) that local

resource issues. 8) Recognises the health of an individual is interconnected with the health of local populations and the planet. 9) Uses an awareness of local resources to enhance patient care whilst minimising inequalities and harm to the planet. 10) Adopts environmentally sustainable practices through adapting their prescribing or referral behaviours some of the time.	improve local resource equity. 8) Offers patients non-pharmacological options to treat common issues that are suited to the patient's environment. 9) Considers the environmental, social, and economic sustainability of the health service, for example changes to prescribing and considering the carbon footprint. 10) Uses an awareness of the changing epidemiology caused by planetary health to inform diagnoses and discussions with patients.	communities can access for health. 5) Advocates for improving the health of populations and the planet as well as individuals. 6) Uses planetary health models in day-to-day practice. 7) Actively identifies overprescribing and overdiagnosis to improve patient safety and practice sustainability
---	---	---
